## **Degree Course**

"Investigation Sciences (L-14)"

## Teaching Unit

Element of Computer Science and Data Analysis

Academic Year, Course Year, Semester, CFU A.Y. 2023/2024, I° Year, 2° Semester, 6 CFU

## Teacher

## Prof. Giuseppe Agapito

_	Element of Computer Science and Data Analysis, SSD: ING-INF/05						
Content	Information Processing Systems.						
Teacher	Prof. Giuseppe Agapito Associate Professor, (S.C. 09/H1, S.S.D.: ING-INF/05 Sistemi di Elaborazione delle Informazioni), Department of Law, Economics, and Sociology Univeristy "Magna Græcia" of Catanzaro. e-mail: <u>agapito@unicz.it</u> The timetable of the lectures is published on the website of the Department of Law, Economics, and Sociology. Office hours dates and times are available in the personal teacher web page. The teacher also receives by appointment before and after lessons.						
Teaching Unit	The course aims to provide students with the basic knowledge of computer science relating to the automatic processing of information in all its forms. Specifically, students will learn the principles behind automated data analysis algorithms, methodologies, and software tools suitable for automated information processing. All are aimed at producing knowledge obtained through the study of large quantities and varieties of available data.						
Methods and Criteria for Learning Assessment	<ul> <li>Knowledge and understanding skills: the course aims to provide the knowledge of the main problems related to the organization and automatic management of the data accumulated and available in public and private organizations.</li> <li>Applying knowledge and understanding: the student will be able to use the methodologies learned to support data analysis to produce precise and essential information, which allows them to guide strategies and corporate vision through a data-driven approach.</li> <li>Autonomy of judgment: the student will express a critical attitude to plan, design, and manage data analysis workflows capable of homogenizing information technology with related legal issues.</li> <li>Communication skills: the student will acquire the ability to expose the Topic covered with appropriate terminology.</li> <li>Learning Abilities: the student will acquire the theoretical and practical knowledge to independently address and solve new problems related to data management, which may arise both during studies and during work.</li> </ul>						
Program	Computer Science:         Introduction to Automatic Information Processing using algorithms         Computer Hardware Architecture:         main components and characteristics of a computer (Von Neumann's model);         main memory (functions,						

	characteristics, and organization), Central Processing Unit-CPU (functions, operating and control parts, instruction cycle), system bus (organization, advantages and disadvantages), input/output interfaces, mass memory.				
	5				
	Computer Software Architecture:				
	conventional architecture of an operating system (kernel, memory manager, input/output manager, file manager,				
	command interpreter), utility programs.				
	Application Software:				
	Introduction to application software, word processing software, use of spreadsheets, data analysis using				
	spreadsheets				
	Computers Networks:				
	Understanding the term Information and Communication, Technologies (ICT), ICT in everyday life.				
	Computer Science Security:				
	Fundamental Concepts				
	Security and Privacy				
	Software licenses and open source:				
	copyrights, software licenses, history of open source,				
	open source operating systems, etc				
	Programming:				
	Introduction to programming, system developing, the				
	programming languages, programming methods, etc.				
	Cloud Computing:				
	Introduction to cloud computing, the paradigms of cloud				
	computing, the services of a cloud infrastructure				
	Informative system:				
	information systems, information tools for company management, CRM systems, processing of transitions				
	Databases:				
	Introduction, database models, relationships, queries, data warehouses, data mining				
	Blockchain:				
	Introduction, Distribute Ledger Technology, the communication protocol, mining activity, Blockchain and				
	Bitcoin				
	<b>Computer science as a social fact</b> Digital awareness, health protection, the problems of the				
	digital divide				
	Cyber Attacks and Threat				
	Introduction to the most used cyber-attacks, protection techniques				
	Computer forensics				
	Introduction to computer forensics, digital evidence				
	definition, best practice to preserve digital evidence.				
Student workload	The amount of study required to prepare for an exam varies according to the personal abilities of the individual student. The indicated				
	1. 10 million of the marriadi student. The marcated				

program requires approximately a personal study of 120 hours.         Topic: Computer Science         [2] Chapter 1. (Tot. 20 pages)         Lectures notes: provided by the teacher.         Topic: Computer Software Architecture         [2] Chapters 2. 3, 4. (Tot. 90 pages)         Lectures notes: provided by the teacher.         Topic: Computer Software Architecture         [2] Chapters 8, 9, 14. (Tot. 65 pages)         Lectures notes: provided by the teacher.         Topic: Computer Software         [1] Chapter 5 (Tot. 40 pages)         Lectures notes: provided by the teacher.         Topic: Computer Software         [1] Chapter 5 (Fot. 40 pages)         Lectures notes: provided by the teacher.         Topic: Software licenses and open source:         [1] Chapter 7 (Tot. 18 pages)         Lectures notes: provided by the teacher.         Topic: Cloud Computing:         [1] Chapter 10 (Tot. 29 pages)         Lectures notes: provided by the teacher.         Topic: Cloud Computing:         [1] Chapter 10 (Tot. 29 pages)         Lectures notes: provided by the teacher.         Topic: Cloud Computing:         [1] Chapter 11 (Tot. 15 pages)         Lectures notes: provided by the teacher.         Topic: Databases:         [1] Chapter 13 (Tot. 20 p		
<ul> <li>[2] Chapter 1. (Tot. 20 pages) Lectures notes: provided by the teacher.</li> <li>Topic: Computer Hardware Architecture</li> <li>[2] Chapters 2, 3, 4. [1] Chapter 10 (100, 10 pages)		
	L	[1] Onapter to (tot. To pages)

	Lectures notes: provided by the teacher.					
	Total Number of pages <b>337</b> to study concerning <b>6 CFU</b> ( <b>min</b> number of pages <b>300</b> , <b>max</b> number of pages <b>360</b> )					
Teaching Methods	The course will be divided into a part of theoretical lectures in the classroom and another part of assisted exercises that will be held in the laboratory or classroom and require PCs made available in the University laboratories or the classroom through your own PC. The activities are mainly aimed at data analysis using software frameworks such as Weka, Python, R, Spark, Hadoop, and Knime suitable for Data Management.					
	<ul> <li>[1] Dennis P. Curtin, Kim Foley, Kunal Sen, Cathleen Morin, Informatica di base 7<sup>a</sup> edizione, McGraw-Hill.</li> </ul>					
Textbooks and	Further References					
Textbooks and Further References	• Lectures notes provided by the teacher and supplementary useful material will be made available for the students attending the course on the eLearning platform of university (https://elearning.unicz.it/).					
Support Activities	In addition to the front lectures, students will be supported during laboratory exercises. Furthermore, distributed platforms (Dropbox, Google-Drive, etc.) are used to share educational material (slides, examples, practices, and handouts).					
Frequency Mode	It is desirable to attend lectures and exercises, read carefully the provided didactic material and meticulously follow the instructions provided by the teacher during the course. The slides do not replace the reference texts but offer precise detail on the program carried out.					
	The course does not include intermediate evaluation tests. The final exam will be held orally. Passing the exam is proof of having acquired the knowledge and skills specified in the course's educational objectives. The maximum mark of each test is 30L /30. The final mark reflects what is reported in the following table.					
Methods and Criteria for Learning Assessment	Final Mark	Knowledge and understanding of the subjects	Competence in the analysis and synthesis	Use of references, primarily bibliographic		
	Fail	Major drawbacks. Relevant inaccuracy	Irrelevant. Frequent generalization. Inability to synthesize	Improper		
	18-20	At the threshold level. Obvious imperfections	Capacities are barely enough.	Merely appropriate		
	21-23	Conventional knowledge.	She or He can carry out correct analyzes	She or He uses standard references.		

		and syntheses. Argue logically and	
		consistently.	
24-26	Good knowledge of the subject.	She/He has good analysis and synthesis skills. The arguments are expressed consistently.	She or He uses standard references.
27-29	More than good knowledge	She or He has considerable skills in analysis and synthesis.	She or He delved into the Topic.
30-30L	Considerable knowledge	She or He has considerable skills in analysis and synthesis.	Valuable insights.
